

INTERNSHIP PRESENTATION

Digital Banking Super Dashboard

A UI/UX case study designed during my internship at Codec Technologies

VANSHIKA AGRAWAL

Roll No.: 25SCS1003002869 | Section: 2CSE32

Domain: **UI / UX Design**

Organization: **Codec Technologies Pvt. Ltd.**

Certificate & Offer Letter

Offer Letter — Codec Technologies

Certificate of Internship

UI/UX DESIGN INTERNSHIP

Designing for Trust & Clarity

A full banking dashboard experience — built during my UI/UX Design Internship at Codec Technologies Pvt. Ltd.

[VANSHIKA AGRAWAL

UI/UX Design Intern | 07-07-2026 – 07-08-2026

Where I Did This Project

COMPANY

Codec Technologies Pvt. Ltd.

ROLE

UI/UX Design Intern

DURATION

07-07-2026 – 07-08-2026
DURATION- (1 Month)

MODE

Pan India, Hybrid

PROGRAM

AICTE & ICAC Approved Internship

PORTAL

National Internship Portal

WHY THIS INTERNSHIP

It gave me hands-on, practical exposure to how a real UX problem is researched, structured and designed — from a rough problem statement to a presentation-ready case study.

Google for Education Partner

ISO 9001 Certified

Problem Statement

FinTech

Everyday banking users need to manage payments, loans, investments and cards from one place — without the interface becoming overwhelming, and without compromising on security.

1

No instant clarity

Users need to see their financial position in seconds, not minutes.

2

Security vs. friction

Sensitive actions need protection without slowing down daily use.

3

Keep it simple

A lightweight, scannable dashboard beats a data-dump interface.

GOAL

Objective

1

Apply the end-to-end UX process — research, define, wireframe, prototype, test

2

Design an intuitive, accessible interface for a complex banking domain

3

Practice information architecture & interaction design for a dashboard

4

Design for trust and security without adding everyday friction

5

Deliver a portfolio-ready wireframe set with documented design rationale

Tools & Technologies Used

01

Figma

Wireframing, high-fidelity UI design and interactive prototyping.

02

FigJam / Miro

User flow mapping, information architecture and brainstorming.

03

Design Systems / UI Kits

Consistent typography, color, spacing and components.

04

Nielsen's Usability Heuristics

10-point checklist used to evaluate the design.

05

Personas & Empathy Maps

Core user research methods used to frame the brief.

06

Competitor Analysis

Benchmarking similar banking app dashboards.

UX Design Methodology

Dashboard Home

KEY UX CHALLENGES

- Security + simplicity in every sensitive action
- Clear, reversible multi-step transaction flows
- Financial data clarity at a glance

DESIGN SOLUTION

- Persistent nav groups Accounts, Payments, Loans, Investments, Cards
- Summary-first home: balance, spend & loans as glanceable cards
- Prominent quick actions for the most common tasks
- Progressive disclosure keeps the primary view calm and focused

Low-fidelity wireframe — dashboard home screen

Send Money Flow

HOW IT WORKS

- 1 Select a recipient & enter an amount from Quick Actions
- 2 Review screen summarizes recipient, amount & fees
- 3 PIN confirmation required only above a set threshold
- 4 Confirmation screen shows the transfer succeeded

WHY THIS MATTERS

This staged flow keeps each screen focused on one decision, and reserves extra security friction for the transfers that actually need it.

Low-fidelity wireframe — review & PIN confirmation step

Results & Key Deliverables

Deliverable	What Was Produced
User personas	Busy working professional and small business owner
Information architecture	Accounts / Payments / Loans / Investments / Cards
Core screens designed	Dashboard home, quick actions, transactions, send-money flow
Key UX patterns used	Progressive disclosure, color-coded amounts, staged confirmation

Challenges & Learnings

CHALLENGES FACED

- Balancing information density with simplicity for finance data
- Deciding which actions deserved extra security friction
- Consistency across many screens with no shared design system
- Completing a full case study within one month

WHAT I LEARNED

- How to run a structured UX process under real constraints
- Translating sensitive financial data into scannable interfaces
- Designing for trust & security without sacrificing usability
- Evaluating and iterating designs using usability heuristics

Thank You
